

# #Activity proposal 4

## *Forest walk*

Children can discover barks by exploring the trunks of the plants available in the school garden, in the garden, park...

Approach the trunks to first feel the characteristics of the bark with the hands, then in a second step "capture" with wax paints and the frottage technique the texture of the bark.

The sheets are photographed by the children with the app **Andar per boschi** and are cut out according to the chosen tree. The children can insert up to four different trees.

At this point, the compositional possibilities begin: children design their images by playing with the available elements and their variations.

# *At school*

Connect the tablet to the video projector so children can see the action and the result of the work done on the screen in a large and engaging format. If the video projector is placed on the ground, the trees will create a forest effect in which the children too can enter with their bodies, play with their shadows, invent stories, make digital possibilities interact with the elements of reality.
